#Functions
\#AccuracyCutoffInfo, ConfusionMatrixInfo, ROCInfo function is completetly coded by github user ethen 818
```

```
#The AccuracyCutoffInfo, ConfusionMatrixInfo, and ROCInfo functions in this Rmarkdown are a modified ve
#The following function can be found at the following github page
#https://qithub.com/ethen8181/machine-learning/blob/master/unbalanced/unbalanced code/unbalanced functi
#Credit to user ethen8181 for creating these functions.
# -----
# [AccuracyCutoffInfo] :
# Obtain the accuracy on the trainining and testing dataset.
# for cutoff value ranging from .4 to .8 ( with a .05 increase )
# Ctrain : your data.table or data.frame type training data ( assumes you have the predicted score in
# Otest : your data.table or data.frame type testing data
# Opredict : prediction's column name (assumes the same for training and testing set)
# @actual : actual results' column name
# returns : 1. data : a data.table with three columns.
                       each row indicates the cutoff value and the accuracy for the
#
                       train and test set respectively.
#
             2. plot: plot that visualizes the data.table
